Research Experience

1 **Postdoctoral Researcher** May 2024-Present
Purdue University

- Optimized **ML model training performance under concept drift** [C9].
- Developed an **online resource allocation algorithm** for restless multi-armed bandits (RMABs) in unknown, non-stationary settings [C10].
- Developed an Age of Information (AoI)-based **distributed convex optimization** algorithm under interference constraints [C11].
- Developed **wireless scheduling algorithms for coupled or correlated sources** under interference constraints to minimize remote inference error [J6, C8].
- Jointly optimized **communication scheduling and feature computation** to improve the performance of multi-task remote inference systems [J7, C7].

2 **Research Assistant** Aug. 2018-May 2024
Auburn University

- Introduced a novel research topic on **Remote Inference**. Established an **information-theoretic theory** to interpret **the impact of information freshness on inference error** [C2, C3, C5] by using a generalized conditional entropy and by introducing the concept of ϵ-Markov chain and **ϵ-data processing inequality**.
- Optimized the performance of remote inference systems by designing **scheduling algorithms** for both the single-user, single channel and the multi-user, multi-channel systems [J2, J3, C6, C3]. We proposed a new **"selection-from-buffer"** scheduling model to optimize the remote inference systems. Paper [J3] based on this research received IEEE ComSoc William R. Bennett Prize (2025).
