Work EXPERIENCE

Research Assistant, Real-time Networking Lab, Auburn University

Fall 2018-present

- Developed a novel information-theoretic tool to interpret the importance of information freshness on the performance of real-time applications, such as remote inference and remote estimation [J1, J2, C3, C4].
- Proposed a new information updating model called “selection-from-buffer” model [J1, J2, C3]. When there is a single source-predictor pair and a single channel in a remote inference system, we designed optimal scheduling policies [J1, C1, C3]. When there are multiple source-predictor pairs and multiple channels, the scheduling problem is a multi-action restless multi-armed bandit problem. For this setting, we designed a new asymptotically optimal policy [J1].
- A longer feature can provide better learning performance, but it often requires more communication resources. Jointly optimized length of feature sequences and transmission scheduling for remote inference systems [J2].

Teaching Assistant, ELEC-5970: Applied Statistical and Machine Learning, Auburn University

Spring 2023

- Delivered in-class coding lectures on K-nearest neighbors algorithm, SVM, decision tree, XGBoost, neural network, image classification with transfer learning, text classification with LSTM.

Teaching Assistant, ELEC-7970: Reinforcement Learning, Auburn University

Spring 2020-2022, Fall 2022

- Delivered in-class coding lectures on value iteration, policy iteration, temporal difference, SARSA, Q-learning, DQN, and REINFORCE algorithms.
